COVER STORY

Cube AI – Turning Capacity into Revenue Through Intelligent Decisioning

In Less-than-Container Load (LCL) logistics, profitability is determined not only by winning customers but by maximizing container utilization across every sailing. Traditionally, sales teams engage customers based on relationships, opportunities, and individual priorities, while pricing teams focus on responding to quotation requests. Although effective at the customer level, this approach often overlooks the commercial performance of individual sailings, resulting in underutilized containers and avoidable revenue leakage.

Cube AI, *our in-house AI platform, developed by our Data Science & AI team,* transforms this decision-making process by shifting the focus from customer-centric selling to sailing-centric optimization.

Using historical booking patterns, current container fill rates, demand forecasts, quotation pipelines, and customer engagement signals, Cube AI continuously identifies sailings that are at risk of underutilization. Instead of relying on intuition, sales and pricing teams receive AI-generated recommendations that highlight which sailing requires immediate attention, why it is at risk, and where the highest commercial opportunity lies.

The platform goes a step further by identifying the customers most likely to contribute cargo for each prioritized sailing. AI analyzes historical booking behavior across trade lanes, quotation activity, customer engagement, booking propensity, and several derived commercial signals to recommend the highest-potential customers for targeted outreach. This enables commercial teams to take proactive actions — whether by accelerating customer engagement, adjusting pricing, or prioritizing quotations—to maximize container utilization before departure.

From strategy to execution, our leaders share how Cube AI is strengthening commercial performance across the network.

> LATAM is using Cube AI emails to track volume per box and drive our pricing teams to be more aggressive on boxes where some bookings are needed.
>
> We are working to implement a sort of gamification of the process where each team would have daily missions based on the volume per box, and Cube AI would be the tool to drive those missions."

Sergio Rodrigues, Regional CEO LATAM

> One of the biggest benefits is that it allows both the Sales and Pricing teams to work with the same objective. When a specific trade lane requires additional volume, every quotation and customer opportunity is reviewed with that focus in mind. The team actively follows up on potential opportunities to maximize the chances of converting quotes into bookings and improving utilization on the selected sailings."

Denisse Aviles, Project Manager, LATAM

> I would like to share that everything has been working very well with the CUBE platform from the Mexico team's perspective. It has proven to be a very useful tool for our operations, as it allows us to efficiently review the utilization of each container and gain better visibility for operational follow-up and decision-making.
>
> I would also like to thank you and the team for your support and efforts in developing and maintaining this solution. The platform is adding significant value to our daily processes and helping us work more effectively."

Jonathan Angeles, Director's Assistant, Mexico

Business Impact

Cube AI enables commercial teams to make smarter, faster, and more profitable decisions by:

- Increasing container utilization through proactive identification of at-risk sailings
- Prioritizing commercial efforts toward the sailings and customers with the highest business impact
- Empowering sales and pricing teams with AI-driven recommendations instead of manual analysis

Today, Cube AI is live **across 27 countries,** delivering actionable insights and AI-powered nudges to **more than 1,300 commercial users,** helping transform fragmented sales activities into coordinated actions that improve network profitability.

Cube AI is more than an analytics solution — it is an AI Decision Intelligence platform that helps commercial teams convert every available cubic meter into profitable growth.

Insights. Vision. Inspiration

Our Chairman, Mr. Shashi Kiran Shetty featured in Fortune India's Unscripted Podcast

We are delighted to share that our beloved Chairman, **Mr. Shashi Kiran Shetty,** has been featured in the latest episode of **Fortune India Unscripted.**

In this engaging conversation, Mr. Shetty reflects on his entrepreneurial journey, sharing insights into the vision, resilience, and innovation that have shaped Allcargo Group's growth into a global logistics leader. It also covers his leadership philosophy, our digital transformation journey, the focus on nurturing young talent, and his vision for the future of the logistics industry.

The episode offers valuable perspectives on leadership, growth, transformation, and the opportunities ahead for the industry.

Watch the full conversation and gain insights from Mr. Shetty's inspiring journey and vision for the future.

WHAT'S UP @
ECU WORLDWIDE

Charting a Stronger Maritime Future

Allcargo Group formalized a strategic partnership with India's National Maritime Foundation

As global trade networks continue to evolve, the maritime sector remains a critical enabler of economic growth, supply chain resilience, and connectivity between markets around the world. Alongside investments in infrastructure and technology, the future of the industry will increasingly depend on knowledge, research, collaboration, and the development of skilled talent.

Against this backdrop, Allcargo Group, through its CSR arm, Avashya Foundation, recently formalized a collaboration with the National Maritime Foundation (NMF), India, to advance maritime research, knowledge exchange, thought leadership, academic collaboration, and skill development.

The partnership brings together industry and strategic research institutions around a shared belief: long-term progress in logistics and maritime trade is driven not only by physical infrastructure, but also by the ideas, expertise, and institutions that help build capability for the future.

WHAT'S UP @ ECU WORLDWIDE

NMF is one of India's leading maritime think tanks, bringing together government, academia, industry, and the strategic community to advance research and informed dialogue on areas including maritime strategy and security, logistics and supply chains, sustainability, the blue economy, international maritime law, and emerging geopolitical developments.

Through the collaboration, Allcargo Group and NMF will explore opportunities for joint research and publications, lectures, workshops, conferences, knowledge exchange programs, industry-academia engagement, and skilling initiatives. The partnership will also support the development of thought leadership and encourage dialogue on issues shaping the future of the maritime and logistics sectors.

The Memorandum of Understanding (MoU) was formally signed at Allcargo Group Headquarters in Mumbai in the presence of the Guest of Honor, Vice Admiral Pradeep Chauhan, Director General, National Maritime Foundation.

The occasion was attended by Board members and senior leadership, including Deepak Shetty, Director, Allcargo Global; Adarsh Hegde, Managing Director, Allcargo Global; and Indrani Chatterjee, Group Chief Human Resource Officer, among others.

Sharing his thoughts on the occasion, Chairman Mr. Shashi Kiran Shetty emphasized the importance of investing in knowledge, institutions, and people alongside infrastructure, noting that sustainable progress is achieved when industry, academia, and research organizations work together to create capability for future generations.
You can read his full address here:

Good afternoon.

Vice Admiral Pradeep Chauhan, Director General of the National Maritime Foundation; distinguished guests; members of our leadership team; and colleagues. It gives me great pleasure to welcome all of you to Allcargo House today.

I would like to begin by extending a very warm welcome to Vice Admiral Pradeep Chauhan. Admiral Chauhan has served our nation with distinction for more than three decades through the Indian Navy, including as the first Assistant Chief of Naval Staff for Foreign Cooperation and Intelligence and as Commandant of the Indian Naval Academy. Following an exceptional career in uniform, he continues to contribute significantly to the nation through his leadership of the National Maritime Foundation and through his efforts to strengthen India's maritime thinking, strategic research and policy discourse. Admiral, it is an honor to have you with us today.

I would also like to acknowledge the important role that the National Maritime Foundation (NMF) has played in India's maritime ecosystem. As India's premier non-governmental maritime think tank, the NMF has established a respected platform that brings together government, academia, industry and the strategic community to advance research, encourage dialogue and deepen understanding of issues that are critical to India's maritime interests.

The work of institutions like the NMF becomes especially important at a time like this. India stands at a pivotal moment in its development journey. As our economy expands and our role in global trade continues to grow, the maritime sector is becoming increasingly central to our future. It is therefore fitting that we are gathered here today to formalize a partnership between Allcargo Group, through the Avashya Foundation, and the National Maritime Foundation.

While today's occasion marks the signing of the MoU, it marks the beginning of something much larger. The coming together of two institutions that share a common conviction: that India's maritime future will not be shaped by infrastructure alone. Ports, logistics networks and connectivity are essential. But equally important are knowledge, research, collaboration and our ability to build capabilities for the future. That shared belief is what forms the foundation of this partnership.

Through this collaboration, we hope to create a long-term platform for research, thought leadership, academic engagement, skill development and industry dialogue. More importantly, we hope to create an ecosystem where academia, industry and strategic institutions work together to generate ideas, develop talent and contribute to the advancement of India's maritime and logistics landscape.

I also believe there is a significant opportunity to engage institutions such as the Indian Institute of Management Mumbai and other leading academic institutions in helping translate ideas into frameworks and policies that can contribute meaningfully to the future of our industry.

The timing of this partnership could not be more relevant. Every nation experience defining periods that shape its future. In my view, India is living through one such period today.

The Government of India has articulated an ambitious vision through Maritime India Vision 2030 and the Maritime Amrit Kaal Vision 2047, recognizing that India's maritime future will be central to the larger aspiration of Viksit Bharat. Together, these initiatives represent one of the most comprehensive maritime transformation program undertaken anywhere in the world, encompassing ports, logistics, inland waterways, shipbuilding, coastal infrastructure, maritime services and the blue economy.

More importantly, they recognize an important reality: India's future prosperity will increasingly be linked to its strength as a maritime nation. When we think about the maritime sector, we often think first of ports, ships and cargo. Those will always remain vital. But maritime capability is much broader. It influences the resilience of supply chains, strengthens economic competitiveness, safeguards trade routes, and supports national security. Importantly, it enables businesses and industries to participate confidently in global commerce.

In today's world, maritime capability is no longer just an industry requirement. It is a national strategic imperative. Having spent my entire career in logistics, I have seen first-hand how maritime connectivity shapes trade, competitiveness and economic opportunity. That is why this partnership is particularly meaningful to me.

Recent geopolitical developments have reinforced this reality. Resilient supply chains and secure maritime networks are no longer purely commercial considerations. They are strategic national priorities.

History teaches us an important lesson. The world's leading maritime nations did not become great simply because they built larger ports or stronger fleets. They invested in institutions, research, and education. Above all, they invested in people. They understood something fundamental: infrastructure creates connectivity, but knowledge creates capability.

That lesson is particularly relevant for India today. As we continue to build world-class maritime infrastructure, we must also strengthen the institutions that generate ideas, develop talent and shape long-term policy. In doing so, we will create opportunities for millions of engineers, technicians, naval architects, sailors and workers who will contribute to India's maritime future.

This is precisely where organizations like the National Maritime Foundation play such an important role. Its work extends across maritime strategy, logistics, supply chains, international maritime law, sustainability, the blue economy and emerging geopolitical challenges. Through research, dialogue and policy engagement, the Foundation is helping to build the intellectual capital that India's maritime future will increasingly depend upon.

That is why I find today's partnership particularly meaningful. This partnership is not centered on financial commitments. It is centered on knowledge, collaboration, institution-building and capability creation. These are investments whose value extends far beyond any individual project and whose impact can endure for generations.

At Avashya Foundation, we have always believed that meaningful development begins with strengthening people and institutions. Whether through education, skilling, healthcare, environmental conservation or women empowerment, our objective has always been to create opportunities that deliver lasting impact. Viewed in that context, today's partnership is a natural extension of that philosophy.

The MoU we are signing today provides a framework for meaningful collaboration across several areas of shared interest. Together, we will advance research, publications and knowledge exchange in maritime strategy, logistics, supply chains and holistic maritime security. We will create opportunities for researchers, experts and practitioners to engage through lectures, workshops, seminars, conferences and other platforms that encourage dialogue and the exchange of ideas.

We also look forward to strengthening thought leadership, contributing to policy dialogue and supporting skilling initiatives. Most importantly, I hope this partnership becomes a platform where ideas are translated into action, where knowledge is transformed into capability and where research contributes meaningfully to both industry and national development. Ultimately, this is what nation-building is about.

Businesses have an important role to play. We create employment, build infrastructure and contribute to economic growth. But our responsibility extends beyond commercial success.

We must also support the institutions that develop future leaders, generate knowledge and strengthen national capability. Over time, we hope to deepen engagement with academic institutions such as Ashoka University, the Indian Institute of Management Mumbai and others, while exploring collaborative research that brings industry and academia closer together.

Sustainable progress is achieved when government, academia, industry and research institutions work together with a shared purpose. Partnerships like this demonstrate what becomes possible when different stakeholders come together in pursuit of a larger national objective.

India's aspiration to become one of the world's leading maritime nations cannot be achieved through infrastructure alone. It will require knowledge, innovation and collaboration.

I am confident that this partnership between Allcargo Group, through the Avashya Foundation, and the National Maritime Foundation will contribute meaningfully to that journey.

Let today's ceremony mark the beginning of a long and productive relationship built on shared purpose, mutual respect and a common commitment to strengthening India's maritime future.

I once again thank Admiral Chauhan, the National Maritime Foundation, and everyone who has worked to make this partnership possible.

I wish this collaboration every success in the years ahead. ”

By creating platforms for research, dialogue, and talent development, the collaboration reflects Allcargo Group's continued commitment to strengthening the ecosystems that support global trade. More importantly, it underscores a principle that resonates across geographies: the future of the logistics and maritime industries will be shaped not only by assets and infrastructure, but by the strength of the ideas, partnerships, and people behind them.

Jyotsna Morris | jyotsna.morris@allcargo.group

From network milestones to business growth and market developments, staying up to date on all things air freight. In this article, we explore the trends, trade lanes, and industries shaping one of the world's largest air cargo markets.

The US Air Freight Market Takes Flight

The United States is the world's largest air cargo market, supported by an extensive network of cargo airlines, integrated express operators, passenger airlines with belly cargo capacity, and some of the world's busiest cargo airports. The market is powered by strong demand across e-commerce, pharmaceuticals, electronics, perishables, automotive, aerospace, and other high-value manufacturing sectors.

> "The USA has the largest Air Freight market in the world, valued at $52 billion, and it is projected to grow at a CAGR of over 4% for the next 8 years. The USA controls about one-sixth of the global Air Freight market."
>
> **Noah Sange**
> **Air Freight Head, ECU Worldwide USA**

What is driving the market?

- **E-commerce** continues to be one of the strongest growth drivers, with companies such as Amazon, Walmart, and other online retailers fueling demand for overnight and two-day deliveries
- **Healthcare and pharmaceuticals** rely on temperature-controlled air freight to safely transport vaccines, biologics, and specialty medicines
- **Electronics and semiconductors,** particularly AI-related hardware and high-value components, move by air due to their value and time sensitivity
- **Automotive and aerospace manufacturers** rely on air cargo to support just-in-time production by rapidly moving critical components
- **International trade** also remains a key contributor, with significant import and export volumes moving between the U.S. and Asia, Europe, and Latin America

Key cargo airlines

Major cargo operators include:

- Atlas Air
- Kalitta Air
- ABX Air
- Amerijet International
- National Airlines

These carriers provide ACMI services, charter operations, military logistics, and scheduled freight services.

Leading freight forwarders

Some of the largest logistics providers operating in the US include:

- Kuehne+Nagel
- DSV
- DB Schenker
- Expeditors International
- C.H. Robinson

In addition to dedicated freighters, **several passenger airlines** transport significant cargo in the belly hold of passenger aircraft, including:

- United Airlines
- Delta Air Lines
- American Airlines
- Alaska Airlines
- Hawaiian Airlines
- Major air cargo hubs

Key US air cargo gateways include – **Memphis, Louisville, Anchorage, Cincinnati/Northern Kentucky, Chicago O'Hare, Miami, New York (JFK), and Los Angeles.**

Among these, Anchorage handles the highest cargo volume by weight, owing to its strategic location as a refueling hub for trans-Pacific operations.

Major U.S. Trade Partners for Air Freight

Rank	Trading Partner	Major Commodities
1	China	Electronics, machinery, consumer goods
2	Canada	Automotive parts, industrial equipment
3	Mexico	Automotive, electronics, medical devices
4	Germany	Pharmaceuticals, machinery
5	Japan	Electronics, automotive components
6	South Korea	Semiconductors, electronics
7	Taiwan	Chips and high-tech products
8	Netherlands	Pharmaceuticals and European distribution
9	United Kingdom	Pharmaceuticals, aerospace
10	Singapore	Electronics and semiconductor logistics

Our Outlook

The US air freight market is expected to maintain steady growth, driven by expanding e-commerce, resilient manufacturing supply chains, semiconductor and AI-related trade, and increasing demand for time-sensitive, high-value cargo.

ECU Worldwide is well positioned to support this growth, with a particularly strong service offering from Miami to Latin America. As an IATA member across all seven US hubs—Miami, Houston, Atlanta, Chicago, New York (JFK), Los Angeles, and San Juan — we work with all major carriers and operate our own bonded, CTPAT-certified warehouse near Miami International Airport.

We are also exploring TSA Certified Cargo Screening Facility (CCSF) status for our Miami facility, which would help reduce cargo screening costs, enable later cargo cut-off times, and offer customers greater flexibility. Backed by an experienced team, regular consol services, block space agreements, and charter capabilities, we are well equipped to support the global network across key air freight markets.

ICS2 in Action:

Why Accurate ENS Filing Matters

Dear all,

Below is an article issued by the Directorate-General for Taxation and Customs Union of the European Union regarding results recorded due to the implementation of the ENS filing for ICS 2 imports into the EU (27 member states), Switzerland, Norway, and Northern Ireland.

Apart from some real success stories, it is emphasized again that all participants in the transport chain need to provide accurate, timely, and complete information about their goods.

Directorate-General for Taxation and Customs Union

The European Union (EU) Advance Cargo Information System (ICS2) helps customs catch smugglers, fraudsters, and criminal activity. The EU's customs authorities play an important role in protecting the EU's external borders and citizens from threats such as counterfeit goods, drug trafficking, and other illicit activities.

The Import Control System (ICS2) is a mandatory, EU-wide IT system that supports these efforts by collecting and analyzing information on goods entering the EU.

The complete transition to ICS2 is part of the safety and security requirements established by the EU's Union Customs Code (UCC). The system has been fully operational across all modes of transport since this year, marking an important milestone in the EU's efforts to improve its risk management capabilities using advanced data analytics. The successful transition has been prepared in close collaboration between the Commission, Member State customs authorities, and businesses. This experience will be useful in implementing the EU's ambitious Customs Reform.

ICS2 is already delivering concrete benefits to frontline customs authorities, protecting citizens and the EU economy.

Here are examples of ICS2 in action in 2025:

- At Luxembourg airport, customs authorities used ICS2 to seize nearly 2 tons of cannabis and more than 360 kg of cocaine, worth 100 million in street value.
- A merchant vessel and its entire cargo were seized by Italian authorities in Brindisi after arriving from Russian territorial waters with a cargo of 33,000 tons of ferrous material. Initially, the transaction appeared legitimate, but further investigations due to the loading port indicated in the ICS2 data revealed inconsistencies and falsifications in the ship's documentation, including a denied port of departure and altered navigation records. The vessel had loaded cargo at a Russian port subject to EU sanctions and had switched off its Automatic Identification System to evade geolocation and monitoring.
- Following a successful cocaine seizure in air freight traffic in Germany, real-time ICS2 cooperation between Germany, Belgium and the Netherlands led to the seizure of a further over 130 kg of cocaine.

- Through ICS2 cooperation with Germany, Dutch customs seized almost 7.9 million untaxed cigarettes from a sea freight container. The cargo was disguised as disposable bowls. The smuggled cigarettes were intended for the French market. This prevented a potential loss of over EUR 3 million in tobacco tax, in addition to the VAT evasion. In another case, Germany intercepted roughly 3.5 million cigarettes thanks to real-time ICS2 collaboration with the Netherlands.
- Spanish customs seized more than 2 tons of cocaine, coming from Ecuador, at the Valencia port, at the beginning of November 2025; almost 800 kg of marijuana, coming from Thailand, were seized at the Barcelona port, at the end of May 2025, thanks to ICS2.
- Danish customs uncovered a suspected alcohol duty evasion scheme triggered by the absence of an ICS2 Entry Summary Declaration.
- Swiss customs seized around 1.1 million cigarettes at Geneva airport based on information received from the United Kingdom. The smuggled cigarettes were disguised as products from a well-known watch manufacturer and destined for Northern Ireland.

These are only a few examples of how the system is used by customs authorities to analyze safety and security data, identify high-risk consignments, and take targeted action to prevent them from entering the EU internal market. While ICS2 has already been proving itself on the ground, the European Commission and national customs authorities continue to improve the system to sustain its effectiveness against illicit and fraudulent activities.

How ICS2 works

Economic Operators who bring goods into the EU or transit them through the EU must submit safety and security data to ICS2 via an Entry Summary Declaration (ENS). Customs authorities then conduct a safety and security risk analysis based on the ENS, enabling them to identify and stop potentially high-risk goods before they enter the EU. Economic operators are also essential in this process, as they need to provide accurate, timely, and complete information about their goods.

Their cooperation has been instrumental in ensuring the smooth operation of the system.

Important Notice: ECU Worldwide Switzerland Termination of Agent Agreement - Compass Cargo

ECU Worldwide Belgium will serve as agent for Switzerland

Dear All,

Please note that we have been informed that the agent agreement with Compass Cargo, as agent for Switzerland, has officially been terminated as of 27/07/26.

For all future shipments to/from Switzerland, please send via **ANR and ECU Worldwide Belgium** will resume its activities **as an agent for the network in Switzerland,** as we did in the past.

As of ATD 27/07/26, all HBLs should be updated to read ECU Worldwide Belgium as the handling agent.

Should there still be shipments/agreements with Compass Cargo after ATD 27/07/26, please note that billing will have to be handled directly by the origin office with Compass, and we, as ECU Worldwide Belgium, cannot assist and will not be involved in any billing-related requests.

Thank you for your understanding.

If you have any questions, please feel free to reach out to SalesANR@ecuworldwide.com

Kind regards,
Team ECU Worldwide Belgium

Dominick Hendrikx | dominickhendrikx@ecuworldwide.com

ECU Worldwide Important Security Alert

Beware of Impersonators Posing as Senior Leadership

Dear Team,

We would like to alert you to a growing cyber threat known as Leadership Impersonation Fraud.

Cybercriminals are increasingly impersonating senior leaders through WhatsApp, email, phone calls, Microsoft Teams, or other social media platforms. They may use fake profiles, unknown phone numbers, AI-generated voices, or even deepfake technology to appear genuine.

These fraudsters typically create a sense of urgency and confidentiality to manipulate employees into sharing sensitive information or making financial transactions.

BE ALERT

- Urgent fund transfers or payments through WhatsApp or personal messaging apps
- Bypass established approval processes for payments
- Purchase of gift cards or vouchers
- Banking details or OTPs
- Sharing confidential business information
- Immediate action with statements such as "Keep this confidential" "Don't inform anyone", "I'm in a meeting and can't talk."

RECOMMENDATIONS

VERIFY
Always verify such requests through an independent and trusted communication channel such as an official phone call, Microsoft Teams, or company email before taking any action.

NEVER TRANSFER FUNDS
Do not process any payment or financial transaction based solely on instructions received through WhatsApp, SMS, email, or any social media platform.

BE CAUTIOUS OF UNKNOWN FILES
Never download or open unexpected ZIP files, executable files (.exe), or suspicious attachments received through messaging applications.

QUESTION URGENCY
Fraudsters rely on pressure and urgency. Pause, verify, and confirm before responding.

REPORT IMMEDIATELY
If you receive any suspicious message or believe you may have interacted with a fraudulent sender, immediately report it to: CISO-desk@allcargo.group

STAY SAFE. STAY VIGILANT.

Cybersecurity is everyone's responsibility. Your vigilance helps protect our organization, our customers, and our colleagues from cyber fraud.

Thank you for your cooperation.

Regards,

Information Security Team

THE ECU WORLDWIDE WAY

This Culture Code brings our core principles to life. You may have heard these ideas from our beloved Chairman, Mr. Shashi Kiran Shetty — this is his philosophy in action. These are not abstract ideals; they are the mindsets and behavior we expect every ECU Worldwide team member to live by every single day. Let them shape how we lead, work, and grow — together, as one ECU Worldwide.

1 Do the right thing—even when it is hard.

Our company is the collective soul of its people. Its strength lies in our sincerity, values, and professionalism.

Keep your promises to customers, partners, and one another. We do not manipulate numbers. We do not cut corners. We are not here for shortcuts. We are here to build something that lasts.

Integrity includes financial discipline. Treat the company's money like it is your own. Avoid waste. Choose frugality over flamboyance. Profit and cash flow are not luxuries; they are responsibilities. Our focus is on long-term value, not quarterly optics.

Integrity also shapes how we represent our brand. Every commitment must be delivered with excellence and transparency.

2 If you truly and simply care, you will make it work.

This ethos underpins everything we do.

Care for the people around you. Act with humility, empathy, and respect, whether dealing with customers, colleagues, or vendors. Listen as much as you speak. Time is a form of respect, too. Come prepared, act with purpose, and use your colleagues' time wisely. Every meeting, call, or conversation should move us closer to our goals.

We do not tolerate gossip, leg-pulling, or disrespect in any form.

Contribute to humanity in any small way you can. A culture of care begins when we treat every interaction as an opportunity to help. We take pride in simply being helpful by nature.

Aspire and dream big while being the best version of yourself. Respect your body with healthy habits, and your soul with positive thinking. In the end, success is not just what we achieve, but how we live, give, and grow — together.

3 Our customers are the reason we exist.

Their trust and investment fuel our journey. We honor that by staying relentlessly committed to value creation.

Customer satisfaction is not just a metric; it is the foundation of sustainable growth. In a world full of choices, we must earn our customers' trust every single day. Let us be grateful for their business and obsessed with delivering consistent delight.

We draw inspiration from the Indian philosophy of *'Yogah Karmasu Kaushalam'* — excellence in action. At ECU Worldwide, we do not wait for ideal conditions; we make things happen. We act with urgency, own our outcomes, and never let problems linger. In our transactional, low-margin, commoditized industry, the customers do not wait.

Mistakes are expected. Stagnation is not. If you fall, fall forward. Learn fast. Try again. Celebrate success but never rest on it. The customer is never satisfied, and neither are we.

4

Think and act like an owner.

Trust is built through ownership. We believe in empowering strong, independent teams.

Responsibility is given early because we believe in your potential. If you are trusted with a decision or project, treat it like your own. If you are assigning ownership, give clarity, support, and space, then let people lead.

Ownership means thinking ahead. In a volatile industry, surprises are expensive. Anticipate problems. Plan alternatives. Resilience is built by those who prepare.

5

See every challenge as an opportunity.

Narrow-mindedness and complacency are fatal. Healthy debate is welcome. Once we align, we execute with both structure and agility. Process gives us consistency. Adaptability gives us an edge.

As markets, technologies, and customer expectations evolve, so must we. Innovation is not a department; it is a habit. Each of us should spend time every week, not just our tech teams, thinking about how to improve what we do.

While money can buy technology, it is our ability to use it that defines success. We win by leveraging our platforms to collaborate internally, compete externally, and create value.

We nurture innovation by empowering our younger generation. Their energy and creativity are our edge. We see their success as our own.

6

Communicate, communicate, communicate.

If a pattern is concerning, raise it. If an idea is promising, share it. If a task is unclear, ask. If a problem is hard, ask for help.

Be honest and transparent, especially when things go wrong. Face facts. Take accountability. Ask for help when needed. Do not hide behind hierarchy or bureaucracy.

Strive for simplicity in communication and in action. The wheels will always be turning at ECU Worldwide, but creating wheels within wheels only slows us down.

7

In a global network business, collaboration is not optional— it is essential.

We are proud to be a globally led organization with 180 countries worldwide. Cross-cultural collaboration is our daily reality and our greatest strength.

No single team, country, or department wins alone. We succeed through alignment, respect, and shared goals. We lead with global professionalism and local intuition.

We build network effects by breaking silos. Collaboration means being accessible, dependable, and focused on the greater good. It is not about credit. It is about collective progress.

Diversity is our advantage. We draw strength from our differences in culture, style, experience, and perspective. Working across languages and locations, we build inclusive habits and celebrate plural thinking. At ECU Worldwide, collaboration means making space, not just making plans.

Collaboration is our operating system. It is how we scale, how we innovate, and how we serve.

This is the ECU Worldwide Way.

Rooted in the entrepreneurial spirit of our beloved Chairman.
Carried forward by every team member.
Lived every day.
Led by example.

Let us build the future of logistics – together.
